

## Privatus

COMPLEMENTS

2023

Antonio Citterio

## Description

---

Only a complementary piece in appearance, the Privatus windscreen responds to the need to define the spaces in large rooms of stately homes; for example, this can be used between reception and dining areas, or behind the headboard of the bed to outline the sleeping area. The panels are covered with a handmade fabric, composed of 50% raffia and 50% banana leaf, and fixed on a support for greater stability. The panel is thus slightly sound-absorbing and endowed with a tangible materiality without being intrusive. The profile is made of bronzed nickel and painted aluminium. It consists of three, four or eight panels.

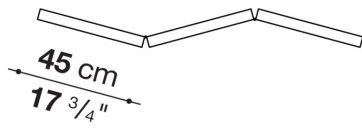

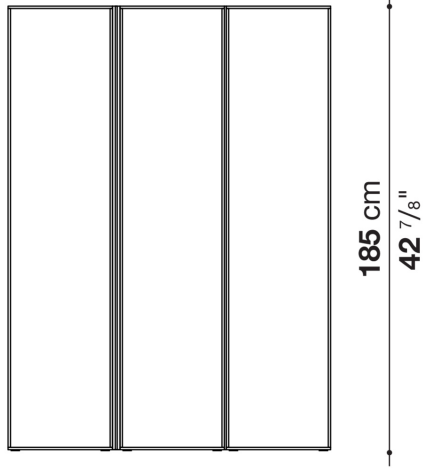

## Technical information

---

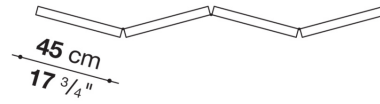

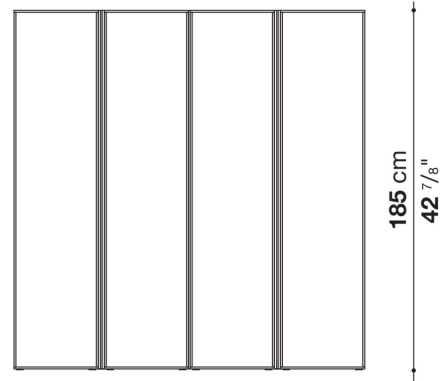

Peripheral profile  
aluminium extrusions  
Internal frame  
solid wood, plywood panel, polyurethane cover  
Ferrules  
plastic material  
Cover  
woven raffia
