# ELIO

YABU PUSHELBERG

Elio, designed by Canadian design firm Yabu Pushelberg, is characterised by a softly rounded silhouette that draws inwards to create a cocoon effect. The armchair, lounge chair, high-back lounge chair and two-seater are framed by natural teak, which supports the seating shell. The seats are handwoven in Tricord rope.

## FABRICS & MATERIALS

### MATERIALS

#### Frame:

**Teak** is a beautiful and long-lasting wood, which is stable and resistant to weather and water. The wood is high in natural oils, which leads to low moisture absorption and high stability. Additionally, the wood is resistant to fungi, parasites, and insects.

After 75 to 80 years, a tree has reached maturity. The trees have been ringed, eventually losing the majority of their sap and are felled and sawed up about two years later. Drying the wood is a critical step that determines how it will react later. Drying time and speed are determined by the thickness of the material to achieve the ideal moisture level between 8 and 12 percent.

When it comes to quality, Tribù makes no concessions, using only carefully selected mature teak from three of the highest quality Indonesian plantations in Eastern Java, all of which meet the strictest environmental standards. Tribù Asia, a European-led organization, inspects local productions all year round.

#### Weave:

**Plaited Tricord®** is a brand new composite material for which Tribù has exclusivity. It is a unique combination of nautical and synthetic fibres. The inside consists of unbreakable polyester that gives it strength and stability. The outside is a combination of nautical fibres that create a surprisingly soft touch and natural appearance. The composition of these nautical fibres (polyofin) makes Tricord® completely resistant to outside influences: frost, water, fungi and UV-rays. The furniture is hand woven - no two pieces are ever alike. The unique craft appearance is part and parcel of the charm of the product and cannot be regarded as a fault. The backs of the Mood and CTR collection can be purchased individually and easily replaced if necessary.

### CUSHIONS

The filling has a cover in a laminated, water-repellent polypropylene material which prevents water from penetrating. The thread used to stitch the seams swells when getting wet, preventing water from penetrating through the seams. Moreover, the seams are protected on the inside with an extra covering. If nevertheless water should penetrate, the material is breathable, letting moisture out to prevent moulding. Fabrics available in category D, E & F.

## HOW TO MAINTAIN YOUR FURNITURE

**Teak** left in its natural state, is virtually maintenance-free. It can be left outside all year round, surviving even the most extreme weather conditions. New teak will experience natural oil surfacing that appears like a “watermark” or irregular pattern of discoloration. These areas are part of the natural maturing process and can be removed with gentle washing with Teak Super Cleaner.

Over time, untreated teak furniture which is exposed to sun and rain will turn silver grey. This process is cosmetic and does not harm the strength or quality of the wood.

To avoid the annual cleaning of the wood, you can apply Teak Sealer. Teak Sealer contains UV protection to slow down the graying from the sun as well as a fungicide to prevent the growth of mold and mildew. Teak Sealer can be applied to new teak or old teak furniture after it has been cleaned. We recommend using Teak Super Cleaner to clean soiled furniture. If Teak Sealer is applied every season, a simple cleaning with water and a pH neutral soap will do for years. Teak Sealer is a sealer and is not the same as varnish. It is breathable, letting the natural oils escape without bubbling or peeling like varnish.

Teak Protector protects the wood against stains and green deposit, without colouring the wood. We recommend to apply it after each cleaning.

Before use, we recommend to treat **the Tricord® weave** with Textile Protector which applies an invisible, dirt and water repellent film. The straps can be cleaned with clear water and a ph-neutral detergent or Synthetics Super Cleaner. Allow the detergent to act for a while, then rinse abundantly with clean water. Drying may take a while on cloudy days.

After cleaning, treat with Textile Protector. The cleaning will become easier and will require mainly rinsing with clean water.
